

Acanthus Planter

Providing Drainage for Your Plants

This planter is made of watertight fiberglass, reinforced polyresin. It is a perfect container for forced bulbs or other plants that you wish to display indoors or out. **We do not recommend drilling drainage holes into the planter. Polyresin fiberglass particulates are considered unsafe if inhaled.**

Because the planter does not have drainage holes, we recommend placing 3 inches of stone or gravel in the bottom before adding planting mix. This will help protect plant roots from becoming waterlogged.

If you are using the planter outdoors, consider placing it in an area that is protected from heavy rainfall.
