

Rodent Screen

The Rodent Screen prevents rodents from burrowing under your composter while still allowing worms and beneficial microorganisms to travel back and forth between the ground and the compost. The Rodent Screen can be used with the Pyramid Composter or the SpaceSaver Pyramid Composter.

Installation Instructions:

Pyramid Composter:

1. Assemble the composter, following the assembly instructions provided.
2. Place the composter where you want it and remove the cover.
3. Place the Rodent Screen inside the composter and press it to the bottom, making sure the edges of the screen are even on all sides of the composter.
4. The installation is complete. You can now use your composter.

SpaceSaver Pyramid Composter:

1. Assemble the composter, following the assembly instructions provided.
2. Choose a location for your composter and lay the Rodent Screen on the ground, then place the SpaceSaver Composter on top of the Rodent Screen.
3. We recommend using Extra Tall Earth Staples to anchor the "ears" of the composter to the ground (see composter assembly instructions). Installation is now complete.
