

Garden Mirror

Professional landscape designers use mirrors to trick the eye, adding depth and interest to gardens of all sizes. Our garden mirror is designed to be positioned at the end of a path, in a garden bed, or anywhere you want to add visual depth to your landscape.

Assembly Instructions

Step 1. The Mirror is made of unbreakable acrylic and is covered with a protective film. To remove the film, slide the mirror out of the frame and lift off the film.

Step 2. Attach the two stabilizing feet onto the bottom of the frame legs, using the screws that are provided.

Step 3. Carefully replace the Mirror in the frame.

Care Information

The Garden Mirror frame is made of steel and has a protected weather-resistant, powder-coating. Over time, the steel will eventually begin to oxidize; forming rust. To prolong the original look of the frame, we suggest touching up any rusty spots as soon as they appear. Use a rust-resistant paint for metal surfaces.
