

Scroll Light Garden Light Installation

The Scroll Light Garden provides plenty of room to show off all your prized houseplants. Full spectrum T5 fluorescent lights help plants thrive, while watertight steel trays on the bottom three shelves protect your floor from drips or spills.

Assemble the light stand using the instructions provided with the stand, then use these instructions to affix the lights to the stand.

Safety Information

- Use the power cord only with a properly grounded, 3-prong electrical outlet or power strip. Do not use with a two-plug outlet or extension cord unless the adapter you use is properly grounded.
- Always turn off the power to the light fixtures when inserting, removing, or adjusting the fluorescent tubes.
- If water is spilled near the power source, unplug the unit before you wipe up the water.

Instructions

Step 1. Important!

Allow Velcro Strips to “Cure” for 24 hours BEFORE attaching the Lights to the Scroll Light Garden.

Industrial strength Velcro Strips are provided for attaching the Lights to the Light Garden. You will use 2 sets of Velcro Strips per light. To ensure the Velcro adhesive reaches maximum strength, you must apply the Strips first, then allow the Strips to “cure” for at least 24 hours before they are ready to bear the weight of the Lights.

Over, please

Step 2. Attaching the Velcro:

Working on the underside of the Shelves, determine exactly where you want to position the lights before you affix the Velcro Strips. (see illustration below). **The Lights can be positioned only to a maximum of 6 inches apart (with only two bars between the Lights).**

Step 3. Pull apart the Velcro Strips and affix two of the “hooked” fiber Strips to the metal bars and 2 of the “looped” fiber Strips to the top side of each light as shown. **Allow Velcro Strips to “Cure” in position for 24 hours BEFORE attaching the Lights to the Scroll Light Garden.**

Step 3. Attach the lights to the Velcro Strips (2 per shelf). Make sure the end of the lights that receive the Linking Cord are facing the opposite direction, then plug the Linking Cord into the end of each light. For proper operation, do not over-stretch the Linking Cord.

Ordering Information:

For replacement T-5 Fluorescent Bulbs (set of 4), order #87-503
