

Tomato Success Trolley

Assembly Instructions

Using this Trolley will let you tend to plants without bending over or straining your back. The Trolley comes with locking casters and disassembles easily for off-season storage. The only tools you'll need for assembly are an adjustable wrench (included) and a rubber mallet.

Step 1. Using the bolts and nuts provided, attach the four frame bars together as shown (Figure 1). Note the correct positioning of the two tall narrow frames and two short wide frames.

Step 2. Before inserting the casters, insert a black plastic adapter inside each leg of the tall narrow frames. Use a rubber mallet or hammer to gently tap the adapters until each one is flush with the square opening of the leg.

Step 3. Insert a caster into the bottom of each leg. We recommend using a rubber mallet for the casters too.

Step 4. Slide the shelf into place by fitting the four corner pins on the shelf into the predrilled holes in each leg. Because the Self Watering Planter is heavy once it has been planted, we recommend placing it on the Trolley before filling it with planting mix.

Safety Warning: Place the Trolley in a location protected from strong winds to prevent it from rolling or tipping. Lock the casters when the Trolley is stationary.

The assembly is now finished. We hope you enjoy using your new Tomato Success Trolley for many gardening seasons to come!
