

Garden Hand

The Garden Hand is an ideal tool for removing stones or debris from garden soil. It's designed to scoop and carry like a human hand. The head is welded of high quality hardened steel with 7 precision "fingers" that glide through soil and capture rocks as small as 1-inch in diameter.

Assembly Instructions

The ash handle is predrilled so assembly will take only a few minutes. Line up the holes on the head and handle. (You may need to firmly tap the head onto the handle to align the holes.) Insert the bolt and tighten with the nut.
