

## Branch Trellis and Edging

Branch Trellis (#37-402)

Branch Edging (#37-403)

*(sold separately)*

The natural twisting and turning of branches is perfectly captured in our matching Branch Trellis and Edging. The Edging requires no assembly. Simply push the Edging into the ground along the edge of a perennial garden or along a path. The Trellis does require assembly and can be used in the garden, or to support annual vines in a pot on a deck.

**Branch Trellis Assembly:** The Branch Trellis has three sections that are to be connected using the dual-threaded inserts provided.

1. Place the threaded inserts (with the “branches” facing up) inside the connecting rods of the bottom Trellis section. Screw the inserts into the connecting rods with only half a turn. This will hold the inserts steady so you can place the middle Trellis section on top of the inserts. ***Note: The Trellis sections fit only one way on the inserts. Simply reverse the position if it does not align initially.***

2. Make sure the Trellis sections are aligned correctly, then twist the connectors into both Trellis sections until tight and both sections stable. Repeat these steps to connect the top Trellis section.

*Although weather resistant, both the Trellis and Edging will acquire a rusty patina over time.*
