

Soapstone Slug Traps

Our soapstone slug traps are a decorative and effective way to rid your gardens of pesky slugs and snails. Simply fill the traps with beer and place them near susceptible plants or in wet shady places where slugs and snails reside.

Check the traps every 2 or 3 days. Empty the contents and refill with beer. At the end of the season, store the traps indoors to protect them from cracking in cold weather. *Note: Because soapstone is a natural material, variations in color are to be expected.*
