

Staked Fairy Dust Balls

Inside each of these hand-blown glass ornaments is a sprinkling of phosphorescent "fairy dust" paint that absorbs sunlight during the day, then, when in shade or in darkness, the Balls glow an average of 2 to 4 hours.

Instructions: Carefully screw a stake into the bottom of each Fairy Dust Ball, then push the stake into the ground in a location that is in direct sunlight and where the ornaments will be safe from impacts with other objects. The stem of each Ball may have an adhesive seal at its base. Do not remove or tamper with the seal as it prevents moisture from getting inside. To prevent damage, be sure to bring the Fairy Dust Balls indoors during freezing temperatures.
