Profile

Trail runners will love the hug-your-foot upper, slim midsole, and pliable yet protective outsole.

What's unique to this shoe?

- One-piece outsole with intuitive lug pattern
- Concave outsole splays out with pressure
- Wide base for stable platform
- Upper foam conforms to foot

Technology

Toe Flex – A toe box split allows the big toe to function independently and engage the runner's natural balance. Flexible materials empower a more efficient push off during the propulsion phase.

Nav Band – This flexible band wraps over the instep to comfortably secure the foot in place. The dynamic stretch provides just the right amount of reinforcement and conforms to individual foot shape and size.

Ideal Heel – Our signature inverted heel promotes a natural foot strike by landing in a more forward position on the foot. This aligns the runner's center of gravity and encourages optimal energy return.

BioMoGo DNA – BioMoGo, our earth-friendly midsole technology, is blended with Brooks® patent-pending DNA smart cushioning to create a springy return and custom comfort. This also reduces the use of energy and amount of waste by removing drop-ins.

Anatomical Last – Designed from an anatomical form, the shoe's shape contours the foot for a glove-like feel and provides support for every part of the foot.

Tuned Density Midsoles – We've tuned the density in our midsoles to better correspond with gender and weight categories, delivering a custom balance of cushioning that's not too soft or stiff.
