

Helpful Tips

Do put liquids in the jar first, and then add remaining ingredients.

- Liquid to solid ratio is key!
 - Add more liquid if ingredients are not blending properly.
- BONUS TIP:** For frozen drinks and smoothies, add enough liquid to the point where your solid ingredients begin to float.

Do make sure you have assembled your jar correctly if you find it is leaking.

- Jar → Sealing Ring → Blade → Jar Bottom

Do use the Pulse button for chopping ingredients.

- BONUS TIP:** Add ingredients in first that you wish to process more thoroughly.

Do not remove lid while blender is in use.

- You may remove filler cap to add small ingredients or liquid.

BONUS TIP: The filler cap can be used as a small measuring cup.

For Best Ice Crushing

Without Liquid

- Up to 6 large ice cubes
- Use Pulse button until you achieve desired results

With Liquid

- Fill jar with ice cubes (no ice limits) and water until ice floats
- Blend on high until you achieve desired results then strain off water
